DKI Jakarta, Indonesia

SUMMARY

Highly skilled and results-driven Site Reliability Engineer (SRE) Lead with 10+ years of progressive experience in IT infrastructure, cloud platforms, DevOps practices, and information security. Proven track record in leading infrastructure transformation using Kubernetes, CI/CD pipelines, and Infrastructure as Code. Strong ability to build scalable systems, optimize performance, and implement security standards such as ISO 27001. Currently open to remote/global opportunities.

EXPERIENCE

System Engineer Lead

Tilaka Nusa Teknologi

09/2025 - Present

- Lead the design and operations of hybrid cloud infrastructure for a leading digital signature and identity verification platform, integrating Nutanix AHV/Prism, Nutanix Kubernetes clusters, and on-premises workloads.
- Spearhead migration projects from Proxmox/VMware to Nutanix, ensuring scalability, security, and high performance to support signature and certificate issuance services.
- Manage and mentor a small Infrastructure/SRE team responsible for HA cluster setup, capacity planning, and disaster recovery to ensure continuous availability of digital signing and eKYC systems.
- Implement Infrastructure as Code (IaC) using Terraform and Ansible to automate provisioning of VMs, Kubernetes workloads, and secure networking for compliance with ISO/IEC 27001 and digital signature regulations.
- Strengthen observability by integrating Prometheus, Grafana, Loki, and ELK Stack with Nutanix and Kubernetes for real-time monitoring, alerting, and auditing of digital transaction services.
- Successfully executed core service migration with near-zero downtime, including live VM migration, VXLAN networking redesign, Kubernetes rollout, and new secure backup & recovery strategy.
- Collaborate closely with VP of IT Operations, DevSecOps, and Product Engineering teams to align infrastructure roadmap with compliance, scalability, and performance goals for the company's trust and signing ecosystem.
- Actively study and implement Public Key Infrastructure (PKI) components, including EJBCA (Enterprise Java Beans Certificate Authority) and cryptographic systems, to enhance certificate lifecycle management, secure key storage, and digital signature validation processes.

IT Infrastructure Senior

Deltadata Mandiri

05/2025 - 09/2025

- Design, deploy, and maintain enterprise-grade VMware vSphere/ESXi clusters, ensuring high availability, scalability, and disaster recovery readiness.
- Lead server and storage infrastructure modernization, including VMware migrations, vCenter consolidation, and cluster performance tuning.
- Manage and optimize on-premise workloads while integrating with hybrid cloud solutions (GCP, Nutanix AHV/Prism, Kubernetes).
- Implement capacity planning, HA cluster setup, backup & recovery strategy, and business continuity solutions across mission-critical systems.
- Automate provisioning and configuration using Terraform and Ansible, reducing manual effort and improving operational efficiency.
- Enhance system observability with Prometheus, Grafana, ELK Stack, and VMware monitoring tools for proactive incident management.
- Collaborate with IT leadership and cross-functional teams to align infrastructure strategy with business growth, security, and compliance goals.

Sr. DevOps & Site Reliability Engineer

11/2024 - 05/2025

Asia Pelangi Remiten ↗

- Leading the design and implementation of a scalable and secure infrastructure architecture for a fintech remittance platform, built on GCP with Kubernetes and microservices architecture.
- Managing a small SRE/Infra team, responsible for incident response, production stability, and infrastructure as code (IaC) automation using Terraform and GitHub Actions.
- Enforcing security best practices, compliance with ISO/IEC 27001, and internal auditing processes for infrastructure and operational workflows.
- Driving observability improvements using Prometheus, Grafana, and Loki to ensure system performance, uptime SLAs, and proactive issue detection.
- Implementing GitOps-based CI/CD workflows to ensure consistent, automated delivery and rollback of services.
- Collaborating with backend, QA, and product teams to improve reliability and reduce lead time to deploy by 70%.
- Developed and maintained backup and recovery strategy, centralized logging, and service monitoring.
- Collaborated directly with CTO, Lead Backend & Frontend, and Lead QA to streamline deployment processes and reduce downtime.
- Led the successful migration of core infrastructure from Google Cloud Platform (GCP) to on-premise environment using Proxmox VE, optimizing cost and improving infrastructure control.
- Performed live VM migration planning, image conversion, and network reconfiguration without significant downtime.
- Integrated Proxmox nodes with centralized logging, monitoring, and backup strategies using existing DevOps stack (Prometheus, Grafana, Loki, etc).

Lead IT System Administrator

04/2021 - 11/2024

Indo Fin Tek ↗

- Led cloud migration project to GCP with zero critical downtime.
- Implemented Terraform for infrastructure provisioning and improved scalability.
- Built monitoring and logging using Prometheus, Grafana, and ELK Stack.
- Automated CI/CD pipelines using GitLab CI, reducing deployment time by 95%.
- Ensured ISO 27001 compliance and acted as Head of ISMS for internal audits.
- Designed and maintained Kubernetes workloads, CI/CD automation, and observability stack.
- Reduced deployment downtime by 90% and improved service reliability.

IT Infrastructure

11/2019 - 04/2021

Trinusa Travelindo ↗

- Managed Linux and Windows infrastructure across multi-site environments.
- Developed access control and asset management systems.
- Led network optimization initiatives and incident response routines.

IT Support Engineer

12/2017 - 11/2019

Aplikasi Karya Anak Bangsa ↗

- Provided Level 2/3 technical support for IT and networking operations across Southeast Asia.
- Maintained Linux servers, VOIP systems, and security infrastructure.
- Configured and deployed Unifi/Cisco/Fortinet devices for regional offices.

IT Support Engineer

04/2014 - 06/2017

Namasindo Plas Abadi ↗

- Managed Oracle systems and Cisco-based networks.
- Delivered internal training and supported user productivity across teams.

IT Support

03/2013 - 03/2014

China National Offshore Oil Corporation ↗

- First-line technical support and V-SAT network management.
- Contributed to infrastructure documentation and system rollout.

EDUCATION

Manajemen Informatika
Politeknik Negeri Lampung - Diploma

06/2009 - 10/2012

CERTIFICATES

Docker Foundations Professional Certificate ↗ Docker	08/2025 - Present
LFS158: Introduction to Kubernetes ↗ The Linux Foundation	07/2024 - Present
LFS180: Introduction to DevSecOps for Managers ↗ The Linux Foundation	07/2024 - Present
Awareness & Internal Auditor of Information Security Management System (ISO/IEC 27001:2022) Intertek	05/2024 - Present
Introduction to Cybersecurity Tools & Cyber Attacks Coursera https://coursera.org/verify/PUFQLYNJ5F63	12/2021 - Present
Preparing for Google Cloud Certification: Cloud Network Engineer Coursera https://coursera.org/verify/professional-cert/2NQ9CLLVZ46Z	09/2021 - Present
Networking in Google Cloud Coursera https://coursera.org/verify/specialization/H3S5Z47BUCX8	09/2021 - Present

Google IT Support ↗ Coursera coursera.org/verify/professional-cert/Z78X2HL6B77Y	09/2021 - Present
Architecting with Google Compute Engine Cloud Ace	08/2021 - Present

SKILLS

OS & Virtualization: Linux (Ubuntu, CentOS), Proxmox, VMware	Monitoring & Logging: Prometheus, Grafana, ELK, Loki
Cloud Platforms: GCP, AWS, AliCloud	Security & Compliance: ISO 27001, pfSense, Network Security, VPN
Containerization: Docker, Kubernetes, Helm	Databases: PostgreSQL, MySQL
IaC & Automation: Terraform, Ansible	Scripting: Bash, Python
CI/CD Tools: GitLab CI, GitHub Actions, Jenkins
